

WaiterPAD Chain Customer Launches Next Phase of Expansion

Chain with over 500 Handhelds Signs Agreement to Upgrade System and Expand WaiterPAD Use

WANGARA, WA Australia – June 15, 2010 – TriniTEQ International Pty Ltd, a leading developer of handheld hospitality point of sale systems, announced today that one of its larger chain WaiterPAD customers signed an agreement for expanded use of TriniTEQ's back of house software and restaurant POS. This agreement valued at upwards of US\$300,000 over the next 18 months is comprised of system upgrades, professional services, recurring maintenance and support as well as additional software licenses in six (6) new stores in 2010.

Liverpool Stores is a multi-billion dollar retail and hospitality chain based in Mexico City. Known as the largest, upscale department store chain in Mexico with over 70 stores, Liverpool has nearly 60 large stores containing table service and/or counter service restaurant operations. Liverpool Stores selected the WaiterPAD system in early 2006 and completed its initial roll out in late 2008.

"We are pleased to be Liverpool's handheld and restaurant system partner," commented Scott Allan, CEO of TriniTEQ International. "Liverpool Stores is a multi-billion dollar enterprise and one of largest restaurant handheld users in the world. Liverpool's expansion and investment in growth are considerable following a difficult 18 months in Mexico. We are proud to be working with their restaurant and technology executives and an important part of their restaurants' growth and success."

WaiterPAD is a complete handheld ordering system designed for hospitality. First deployed in Australia in 1999, WaiterPAD is used by thousands of major restaurants, bars, cafes, theaters and sporting venues around the world. As a low frequency, long-range Radio Frequency (RF) system, WaiterPAD has advantages over Wi-Fi systems. In restaurants with commonly found enclosed rooms, microwaves, glass, steel and liquids, WaiterPAD requires fewer wireless access points and reduces security risk by avoiding more commonly trafficked Wi-Fi frequencies.

About TriniTEQ
